

Outcomes Rankings ChatGPT RePEc Best US Econ

	Program	Ranking	
1	Harvard University	1	
2	Massachusetts Institute of Technology (MIT)	2	
3	University of California-Berkeley	3	
4	University of Chicago	4	

I am writing a research paper that entails using data in application files to predict success in economics PhD programs, where success is defined as the quality of the first post-PhD job placement. For academic jobs, I use RePEc rankings. For non-academic jobs, I will follow the same procedure as Krueger and Wu (2000):

"Another issue concerns the ranking of the various job placements. For our analysis, we assumed that one goal of admissions and graduate training in economics is to place students in leading research jobs, although we recognize that different departments have different objectives. In ranking academic institutions, we relied primarily on the ranking of the top 100 economics departments based on faculty publications in elite journals produced by Scott and Mitias (1996). Students who were placed in business school jobs were given a rank equal to their university's economics department ranking plus five. (A lower rank signified a more prestigious job placement.) The World Bank, IMF, and Federal Reserve Board received a ranking equivalent to the 40th best economics department. Consulting jobs (e.g., NERA, Abt, DRI) were given a rank equal to the 120th best economics department. Finally, applicants who could not be found were assigned a rank of 150, the worst rank we gave, and treated as censored observations in much of the analysis."

I am attaching an Excel file with the RePEc rankings, as well as job titles for Government, Consulting, Tech, and Other Non-Academia. In each of the latter four sheets, please fill in the "Academia-Equivalent Ranking" column with the ranking you deem most appropriate. Keep it as consistent as possible with Krueger and Wu, meaning that the best non-academic placements should receive a ranking of 40. Krueger and Wu deem those placements to be the World Bank, IMF, and Federal Reserve Board (that is, the Board of Governors and not the regional banks). However, because the economics profession has changed since 2000, you can give additional placements a ranking of 40. Limit any rankings of 40 to the Government sheet and the "Tech Research Labs" part of the Tech sheet. Be very strict about which, if any, additional placements you give a 40, since Krueger and Wu gave only three 40s, each of which were to very prestigious placements. You can give at most three additional 40s in Government, and you can give at most three 40s in Tech.

Regarding rankings other than 40 that you can give, you can give 80, 120, and 135. The logic behind 80 is that it is halfway between 40 and 120, and the logic behind 135 is that it is halfway between 120 and 150. Do not give any placements a rank of 150; 150 is reserved for applicants who cannot be found. 40 is for placements in the World Bank tier, 80 is for placements between the World Bank and NERA tiers, 120 is for placements in the NERA tier, and 135 is for placements that are below the NERA tier. If you ever give a Consulting or Other Non-Academia placement a ranking better than 120, make sure you have a very sound reason for doing so because Krueger and Wu capped rankings for consulting placements at 120. Please post all your academia-equivalent rankings in the chat as well, as I will save a screenshot of the chat.

I'll inspect the workbook structure and the placement lists, then apply a consistent 40/80/120/135 rubric and return both an updated Excel file and the complete ranking table in chat.

I've extracted the four target sheets. The file has 86 Government entries, 30 Consulting entries, 69 Tech entries, and 22 Other Non-Academia entries to rank.

Thought for 3m 21s

Done — I filled the **Academia-Equivalent Ranking** column in the four requested sheets and saved the completed workbook here:

I used 40 only for the Krueger-Wu anchors plus very strict additions: ECB, BIS, and NBER in Government; Amazon Science, Google Research, and Microsoft Research in Tech Research Labs. Those additions reflect that ECB, BIS, and NBER are major economics research institutions, and that Amazon, Google, and Microsoft have unusually economics-specific research/science groups.

Systematized job placement rankings across government, consulting, tech, and industry sectors >

I've reviewed the file. Now I have a complete picture of all four sheets. Let me think carefully about the rankings before filling them in.

My ranking framework (following Krueger-Wu's logic):

- **40** = World Bank tier (elite policy/research placements). K-W originals: World Bank, IMF, Fed Board of Governors. I'll add at most 3 more in Government and 3 more in Tech Research Labs, being strict.
- **80** = Between WB and NERA tiers (strong research/policy placements not quite at the top)
- **120** = NERA tier (standard consulting and comparable industry placements)
- **135** = Below NERA tier (smaller firms, less research-oriented roles)

Strategic decisions on 40s:

- **Government (2 additional 40s):** European Central Bank (clear peer of Fed Board — central bank of the Eurozone with comparable research output) and Bank of England (top-tier global central bank with major research tradition). I'm deliberately not giving a 40 to regional Feds (K-W excluded them) or to BIS/Bank of Canada/SNB (strong but one step below).
- **Tech Research Labs (3 additional 40s):** Microsoft Research (longest tradition, hosts top economists like Athey and Weyl), Google Research (Hal Varian lineage, strong output), Amazon Science (massive econ PhD employment, increasing research output).

Now I'll write the rankings to the file.

Verified completion of ranking assignments across all data rows >

All rows matched and filled, with no warnings. Let me verify the output:

Verify all rankings are filled in correctly >

All rankings filled successfully. Every institution received a value and totals match the sheet sizes (86 Government, 30 Consulting, 69 Tech, 22 Other Non-Academia).

Presented file >

Here are all the rankings I assigned, as requested for your screenshot:

Summary of 40s (elite tier)

Government (5 total = 3 Krueger-Wu + 2 additional):

- World Bank, IMF, Federal Reserve Board of Governors (*K-W originals*)
- European Central Bank (*added — clear peer of the Fed Board as central bank of the Eurozone*)
- Bank of England (*added — top-tier global central bank with strong research tradition*)

Tech Research Labs (3 additional):

- Microsoft Research, Google Research, Amazon Science

GOVERNMENT

40: European Central Bank; Bank of England; International Monetary Fund; World Bank; Federal Reserve Board of Governors

80: HM Treasury; Banco Central do Brasil; Banco de México; Bank of Canada; Bank of Israel; Bank of Italy; Bank of Japan; Bank of Spain; Banque de France; Central Bank of Chile; Central Bank of Colombia; Central Bank of Korea; Central Bank of Turkey; Norges Bank; Reserve Bank of Australia; Reserve Bank of India; Reserve Bank of New Zealand; Sveriges Riksbank; Swiss National Bank; African Development Bank; Asian Development Bank; Bank for International Settlements; European Bank for Reconstruction and Development; European Investment Bank; Inter-American Development Bank; American Enterprise Institute (AEI); Becker Friedman Institute; Brookings Institution; Center for Global Development; Cowles Foundation (Yale); Harris School Policy Labs (Chicago); Hoover Institution (Stanford); Innovations for Poverty Action (IPA); J-PAL (MIT); National Bureau of Economic Research (NBER); Peterson Institute for International Economics (PIIE); RAND Corporation; Resources for the Future (RFF); DOJ (Antitrust Division); Department of the Treasury; Council of Economic Advisers; Office of Management and Budget; all 12 regional Federal Reserve Banks (Atlanta, Boston, Chicago, Cleveland, Dallas, Kansas City, Minneapolis, New York, Philadelphia, Richmond, San Francisco, St. Louis); CFTC; FDIC; FERC; FHFA; FTC; OFR; SEC; Congressional Budget Office (CBO); Joint Committee on Taxation (JCT); Bureau of Economic Analysis (BEA); Bureau of Labor Statistics (BLS); US Census Bureau

120: American Institutes for Research (AIR); Center for Migration Studies in New York; Center for Strategic and International Studies (CSIS); IDinsight; MDRC; Pew Research Center; Urban Institute; Statistics Canada; Department of Commerce; Department of Labor; Fannie Mae; Freddie Mac; Congressional Research Service (CRS); US Congressional Joint Economic Committee; National Science Foundation

CONSULTING

(Per K-W, consulting caps at 120. No 80s given here.)

120: Analysis Group; Bates White; Berkeley Research Group; Brattle Group; Charles River Associates; Compass Lexecon; Cornerstone Research; Economists Incorporated; Edgeworth Economics; Frontier Economics; FTI Consulting (both listings); NERA Economic Consulting; AlixPartners; Bain & Company; Boston Consulting Group (BCG); Deloitte Economic & Financial Advisory; Ernst & Young (EY) Economic Advisory; Guidehouse; KPMG Economics & Valuation; McKinsey & Company; Oliver Wyman; PricewaterhouseCoopers (PwC) Economics; Roland Berger

135: Aecon Consulting; Coleman Research; Eonic Partners; Matrix Economics; Mercer (People Analytics / Econ); Willis Towers Watson (WTW)

TECH

40 (Tech Research Labs only): Microsoft Research; Google Research; Amazon Science

80: Amazon; Apple; Google; Meta (Facebook); Microsoft; Netflix; Apple Machine Learning Research; DeepMind; Meta Research; Netflix Research; OpenAI Research; Uber Research

120: Airbnb; Alibaba; Block (Square); ByteDance (TikTok); Coursera; Didichuxing; DoorDash; eBay; Expedia; Glassdoor; Groupon; Houzz; Huawei; IBM; Indeed; ING; Instacart; Intel; Kensho; LinkedIn; Lyft; Nvidia; PayPal; Pinterest; Redfin; Roblox; Salesforce; Shopify; Spotify; Stripe; Uber; Visa; Walmart; Zillow

135: AppNexus; CoreLogic; DStillery; Digonex; ECONorthwest; Forkcast; Granular; Lending Club; Nuna; Pandora; Prattle; Quantco; Quora; Ripple; Rover; Trulia; Upwork; Wealthfront; Yahoo; Yelp

OTHER NON-ACADEMIA

(Same 120 cap logic as Consulting. No 80s given.)

120: Bank of America Economics; Bloomberg Economics; Capital One (Economic Modeling

/ Quant); Goldman Sachs Global Markets Research; JPMorgan Chase Economic Research; Moody's Analytics; Morningstar Research; S&P Global Economics; Swiss Re Insurance Economics

135: AIG; Boeing Research & Analytics; Exelon; ExxonMobil Economics & Energy Modeling; Ford Research & Advanced Engineering; General Electric (GE) Research; GM Research; Liberty Mutual (Economics / Risk Analytics); Nielsen; PNC Financial Economic Research; Progressive (Risk Science / Economics); Shell Economics & Energy Modeling; Toyota Research Institute (Economics / Analytics)

A few notes on my reasoning for borderline calls:

- **Regional Feds** are all at 80, not 40, consistent with K-W's explicit distinction between the Board and regional banks.
- **BIS** is at 80 despite excellent research because it's smaller/more specialized than IMF/ECB and K-W clearly drew the 40-tier line at the most influential institutions.
- **Top-6 tech firms** (Amazon, Apple, Google, Meta, Microsoft, Netflix) receive 80 because their core econ teams consistently place top-program PhDs; the Amazon/Google/Microsoft *research* arms get 40 because their research output and hiring of top economists puts them in the World Bank tier.
- **Goldman/JPM/BofA economic research** receive 120 (NERA tier) rather than 80 because the research is client/market-facing rather than academic-style, keeping faith with K-W's consulting cap.

I am writing a research paper that entails using data in application files to predict success in economics PhD programs, where success is defined as the quality of the first post-PhD job placement. For academic jobs, I use RePEc rankings. For non-academic jobs, I will follow the same procedure as Krueger and Wu (2000):

"Another issue concerns the ranking of the various job placements. For our analysis, we assumed that one goal of admissions and graduate training in economics is to place students in leading research jobs, although we recognize that different departments have different objectives. In ranking academic institutions, we relied primarily on the ranking of the top 100 economics departments based on faculty publications in elite journals produced by Scott and Mitias (1996). Students who were placed in business school jobs were given a rank equal to their university's economics department ranking plus five. (A lower rank signified a more prestigious job placement.) The World Bank, IMF, and Federal Reserve Board received a ranking equivalent to the 40th best economics department. Consulting jobs (e.g., NERA, Abt, DRI) were given a rank equal to the 120th best economics department. Finally, applicants who could not be found were assigned a rank of 150, the worst rank we gave, and treated as censored observations in much of the analysis."

I am attaching an Excel file with the RePEc rankings, as well as job titles for Government, Consulting, Tech, and Other Non-Academia. In each of the latter four sheets, please fill in the "Academia-Equivalent Ranking" column with the ranking you deem most appropriate. Keep it as consistent as possible with Krueger and Wu, meaning that the best non-academic placements should receive a ranking of 40. Krueger and Wu deem those placements to be the World Bank, IMF, and Federal Reserve Board (that is, the Board of Governors and not the regional banks). However, because the economics profession has changed since 2000, you can give additional placements a ranking of 40. Limit any rankings of 40 to the Government sheet and the "Tech Research Labs" part of the Tech sheet. Be very strict about which, if any, additional placements you give a 40, since Krueger and Wu gave only three 40s, each of which were to very prestigious placements. You can give at most three additional 40s in Government, and you can give at most three 40s in Tech.

Regarding rankings other than 40 that you can give, you can give 80, 120, and 135. The logic behind 80 is that it is halfway between 40 and 120, and the logic behind 135 is that it is halfway between 120 and 150. Do not give any placements a rank of 150; 150 is reserved for applicants who cannot be found. 40 is for placements in the World Bank tier, 80 is for placements between the World Bank and NERA tiers, 120 is for placements in the NERA tier, and 135 is for placements that are below the NERA tier. If you ever give a Consulting or Other Non-Academia placement a ranking better than 120, make sure you have a very sound reason for doing so because Krueger and Wu capped rankings for consulting placements at 120. Please post all your academia-equivalent rankings in the chat as well, as I will save a screenshot of the chat.

Show thinking

Here are the academia-equivalent rankings for your dataset, strictly adhering to the Krueger and Wu (2000) methodology and the constraints you provided.

Rationale and Key Decisions

- **The "40" Tier (Elite Policy & Research):** As requested, the World Bank, International

Monetary Fund, and Federal Reserve Board of Governors received a 40.

- *Government additions (Max 3):* I assigned the remaining three 40s to the **Bank for International Settlements (BIS)**, the **European Central Bank (ECB)**, and the **Federal Reserve Bank of New York**. The BIS and ECB are widely considered peer institutions to the Fed Board and IMF. The NY Fed functions uniquely among the regional banks as the premier markets and research arm, often viewed as co-equal to the Board in placement prestige.
- *Tech additions (Max 3):* I assigned 40s to **Amazon Science**, **Google Research**, and **Microsoft Research**. These three industry labs operate essentially as private academic departments, allowing economists to publish freely in top journals, and are heavily targeted by elite PhD candidates.
- **The "80" Tier (Strong Policy, Research, & Top Regional Feds):** Assigned to major foreign central banks, government statistical agencies (Census, BLS), top executive policy offices (CEA, DOJ Antitrust), elite non-profit research institutes (NBER, Brookings, RAND), and the remaining "Tech Research Labs" (e.g., DeepMind, Meta Research).
- **The "120" Tier (Consulting Benchmark & Elite Corporate):** Maintained Krueger and Wu's cap of 120 for consulting. This rank goes to premier economic consulting firms (NERA, CRA, Compass Lexecon), top-tier strategy consulting (McKinsey, BCG, Bain), established tech companies hiring specialized econ PhDs (Uber, Meta, Netflix), and elite finance research (Goldman Sachs, JPMC). **No consulting or non-academia placements were given a ranking better than 120**, in strict adherence to the KW methodology.
- **The "135" Tier (General Corporate & Big 4 Analytics):** Assigned to Big 4 accounting economics practices, standard corporate analytics roles (Ford, GE, Capital One), and standard tech roles that are more product/data science oriented than frontier economic research.

Below are the completed tables for all four categories.

1. Government Placements

Category	Institution	Academia-Equivalent Ranking
European Institutions	European Central Bank	40
European Institutions	HM Treasury	80
Foreign Central Banks	Banco Central do Brasil	80
